Design Wake Up Machine An Extortioner Shredded Coconut Be Coconut Milk System Screw Press Capacity 50Kg Per Hour

Advisor I : Budiono, S.Si ., MT

Advisor II : Dra. Rr. Heni Hendaryati, MT

Until now, obtain coconut milk was still obtain using conventional method which is hand pressed. Later on, manual coconut milk extractor is develop using hydrolic press system. With the development of science and technology in this modern age, people trying to create or make a new, more efficient and practical equipment. Therefore, in this research, the author tried to ease the extraction of coconut milk by designing coconut milk extractor with screw press system which has larger capacity which be more effective and efficient in coconut extraction.

The coconut milk extractor worked by enter shredded coconut into hopper then shredded coconut is carried toward tubular filter contained screw press. After that the milk is produced and the dregs out separately.
